

CAPABILITY STATEMENT

REMOTE MONITORING AND HUMAN PERFORMANCE TOOLS.

Pioneer AI Health designed and powers Pioneer AI Vitals and Pioneer AI Readiness.

COMPANY OVERVIEW

Pioneer AI Health is a Georgia-based, veteran-led healthcare technology company. Current offerings are partner discussions and synthetic-data demonstrations. Production capabilities depend on confirmed deployment scope.

PIONEER AI VITALS

Pioneer AI Health's Remote Patient Monitoring and Remote Therapeutic Monitoring platform. Remote patient monitoring is intended to organize physiologic measurements; remote therapeutic monitoring is intended to support non-physiologic information and engagement around a care plan.

Pioneer AI Vitals serves service members beginning within 90 days before separation from Active Duty. Veterans are eligible once they receive their DD-214 or have completed their National Guard or Reserve status. Pioneer AI Vitals also serves veterans' spouses.

Demonstrated with synthetic data: simulated wearable, mobile-platform, check-in, personal-baseline, and provider-review workflows. Illustrative devices under consideration include Apple Watch, Android-compatible wearables, Garmin, and Fitbit; Apple iOS and Android are mobile platforms. Production compatibility, model-specific measurements, integrations, electronic health records, labs/imaging, risk analysis, alerts, interoperability, and reporting are planned or deployment-dependent. Planned screening support may organize relevant signals for clinician review; it would not diagnose traumatic brain injury, post-traumatic stress disorder, or another condition.

Approved appointment schedule: check-ins at 30, 15, and 5 days before an appointment and 15, 30, and 45 days after it. Any ongoing follow-up is provider-directed.

PIONEER AI READINESS

Pioneer AI Health's Human Performance Platform. Pioneer AI Readiness serves active-duty members and National Guard and Reserve members on active-duty orders. Pioneer AI Readiness is in planning and early development. Illustrative demonstrations use synthetic data and do not represent a live readiness deployment.

CAPABILITY STATUS

- Available now: partner discussions and product demonstrations using synthetic data.
- Planned/deployment-dependent: production integrations, clinical workflows, risk analysis, reporting, and specific supported devices.
- No claim of billing eligibility, reimbursement, clinical effectiveness, certification, or specific integration availability is made.

DIFFERENTIATORS

- Founder-led by a 10-year U.S. Army Healthcare Specialist and Combat Medic
- Five years leading a Veterans Health Administration clinic; four years as a Senior National Service Officer
- Co-founder of The Warrior Alliance
- Mission-first focus on practical workflows and human decision-making
